

First Half of PROGCON

Midterm is already done, which I learned, discover and have fun a lot. I still remember that I feel sad when I saw a programming in our syllabus since when I'm in Senior High School I'm having difficulty in this subject but in this class by using Kahoot games before our lecture, using different application we somehow can create programs in our own. And also, I see the progress in our class when we creating a program like in our first to second week we still having a difficulty but now we can make a problem in less than an hour which is really great because it only show that we really understand making programs.

I'm looking forward for the last half of our subject I hope we can learned a lot and use more application that we can use in making programs. And also can help us to make a program easier. And also I'm looking forward for more lessons while we are having fun that we can learn from this subject.
